#	Priority	Issue / Feature Request Summary / Expected Outcome
1	P0	Slow voice-entry confirmation (LLM timeouts) Reduce API/SmartRouter timeouts, trim LLM generation settings, improve simple detection and logging to bring confirmations down to ~2–5 s even when the LLM fails.
2	P2	Journal title still shows 📝 Daily Journal — {DATE} Scheduled Apps Script journal creation must replace {DATE} so daily docs display the actual date automatically.
3	P0	Person-mention intelligence + dual placement Detect people/sentiment/context (e.g., "Sumit is being lame"), insert structured notes with hashtags, and update relevant time slots/reminders simultaneously.
4	P0	Duplicate entries from voice recording Voice recorder triggers _handleVoiceEntry twice; add a guard so each utterance logs only once.
5	P2	"⏰ Hourly Plan" heading misplaced Move the heading immediately before the time-slot table (after To-Do/Notes/Free-form sections) in template and generated journals.
6	P1	Lat/Lng shown instead of place names Replace coordinates with human-readable locations (Google Geocoding or similar) when geo-tagging entries, with fallback to coords.
7	P1	End-of-day analysis remains blank Auto-fill the analysis section via LLM (what went well, didn't go well, productivity score, mental/physical state, improvements).
8	P0	Hourly task notifications & completion tracking Send hourly reminders, capture completion (yes/no/partial) for each slot, mark tasks (#complete/#partiallyDone), and carry unfinished items into the next day.
9	P1	Multi-hour time-slot creation Support entries like "working 1–3 PM" by creating/using a 1:00–3:00 PM slot instead of a single-hour slot.

10 P0   Retrospective entries should fill past slots
Detect retrospective intent ("I woke up at 9 AM" said at
1 PM) and insert into the past slot for today instead of
converting to a reminder.

11 P0   Voice orb UI/UX & transition overhaul
Rebuild the orb animation to match the Metal Shader example
and implement App Store card—style transition between home
and recording screens.
